

## Quality Policy

FireSeal AB is a Swedish company engaged in trade and product development of fire sealing products for construction, industrial, marine and offshore customers. As part of the Bergman & Beving Group, we adhere to and take note of the policies and guidelines that the Group decides.

### Introduction

Quality work within Fireseal is conducted as an integral part of the business with a commitment and goal to achieve continuous quality improvement. Legislation constitutes minimum requirements and, together with internal and other external requirements, contributes to our continuous development. The purpose of this policy is to describe Fireseal's approach to its work with quality related matters.

### Objective:

We make our customers' everyday lives easier, safer and more profitable.

We provide products and services with the intention to:

- Be both B2B partners and end-users' best choice.
- Secure fire protection to save property and lives.

### Quality

High quality is extremely important to our business, and in our case, that means safe and long-lasting product requirements. Our products should guarantee installations that do not limit the lifespan and/or safety over time of buildings, ships or other facilities in which they are installed. The quality of the final installed product must therefore be kept at a high and constantly maintained level for each individual penetration. In addition to our product range, we offer services designed to help users perform their installation work correctly and more efficiently. ***Our motto is "easy to make safe".***

Fireseal's quality policy is normally reviewed and renewed by the company's management team once a year.
